response

Built-in Video Conference System

1200W camera
8m distance sound pickup
Annotation Synchronization

Intelligent Writing

...frees your imagination

Screen writing is superior to paper writing

Projected capacitive and EMR combined touch technology creates 0.04s response time and brings you fluent and instantaneous writing experience.

1024 levels pressure sensitivity offers pixel-perfect precision and unmatched versatility.

Free annotation records your inspiration

Annotation is available at any interface to record your inspiration. When playing PPT, your annotation can be individually created in every page and easily saved.

Smart assistant writing makes your work easier

Dual-pen and Dual-color writing, matched with innovative graphic intelligent recognition technology, table insertion, and smart gesture control, simplifies your work.

Convenient saving and sharing meeting records

Conference documents and records can be easily stored and shared by email and re-edited in the future as well.

Multi-screen Interaction

...eliminates the cable limitation

Touch and share, synchronous mirroring can be done through mobile devices

Free multi-terminals connection can be achieved on PC or mobile device with wireless mirroring and related software, supporting up to 4 devices mirroring simultaneously and providing you clear comparison of presentation.

Real time mirroring presents fluently and stably

0.04s fast writing response
+-0.5mm writing accuracy
Graphic recognition & smart chart

Double-directional operation creates flexible and efficient interaction

With MAXHUB wireless sharing, you can operate PC reversely with MAXHUB Conference Flat Panel, or use mobile devices to directly write, annotate, present, etc on the panel.

Complete Conferencing Solution

Interactive and reliable

With its reliable technology, sharing of ideas has never been so easy!

Home Office Solution

As Effective As in Office

Challenge

To protect employees from COVID-19, most enterprises are advising their staff to work from home. Our product's interactive flat panel empowers enterprises and individuals to collaborate efficiently and share new ideas in real-time even from afar.

Solution

- **Interactive Teleconference**

The product supports various formats of teleconferences. In addition to face to face communication, it also makes it possible to share screen contents, be it a presentation or a whiteboard session, or even a video

- **Intelligent Writing**

An in-built whiteboard offers an instant way of board-writing. The intuitive gesture design makes writing even faster and smarter; erasing, zooming, etc., all at your fingertips. Upon finishing the board writing, a QR code could be generated, with which you can share the meeting minutes instantly.

- **Wireless Screen-sharing**

When it comes to comparing multiple screens, our product offers wireless screen-sharing from up to 4 devices. It's large UHD display helps the audience see the tiniest detail. Besides, adding some on-screen annotation may help your team get better engaged during a brainstorm or teamwork session. It is not only sharing screen but ideas.

Product Highlights

 Stable, Bright, UHD Display

 6-Element Mic Array

 Single Tap to Launch Teleconference Apps

Up to 12MP Camera

Intelligent Writing

Wireless Screen-sharing

Medical Solution

Remote Collaboration

Challenge

As the COVID-19 spreads across the globe, medical institutions and health workers are faced with growing challenges. Reducing the risks of infection amongst medical staff and coordinate medical supplies across the nation is vital in the days lay ahead.

Solution

- **Isolation Wards Communication**

With this solution, it makes it possible for medical staff to have real-time communication between the isolation ward and their offices even without coming face to face via teleconference applications. Hence the risk of infection amongst medical workers would be vastly reduced.

- **Remote Experts Collaboration**

The Medical Solution empowers the connection with global experts via teleconferencing and shares treatment protocols in a timely fashion to help battle an outbreak.

- **Medical Images Examination**

Patient's medical images could be shared onto the UHD display instantly. Zooming in and out helps doctors to closely examine the details of the radiographics.

Product Highlights

 **UHD** Stable, Bright, UHD Display

 **6-Element Mic Array**

 **Single Tap to Launch Teleconference Apps**

 **Up to 12MP Camera**

 **Intelligent Writing**

 **Wireless Screen-sharing**
